———Make IP more valuable

Elves

ELVES Introduction

ELVES is an NFT Metaverse IP ecological platform based on block chain technology. It is developed by global block chain enthusiasts. By introducing the world's top IP and electronic games, it builds a new Metaverse ecology. On the ELVES decentralized platform, all digital collections are limited editions that can be purchased, traded, upgraded and customized.

ELVES combines Mystery box collection, block chain games, 3D, AR, art, NFT and DeFi to create a Metaverse ecological closed loop with the core goal of maximizing global IP value.

E L V E S O R I G I N

ELVES Origin

Since 2009, with the maturity of block chain technology, more and more funds have begun to flow to the field of block chain, and the public has begun to pay attention to the impact of block chain on social development and the role of digital currency in world economic activities.

Digital assets in the field of block chain are divided into homogeneous digital assets and non-homogeneous digital assets, among which homogeneous digital assets, represented by BTC and ETH, have been greatly developed, while in the field of non-homogeneous digital assets (NFT), large-scale applications have not yet appeared except for block chain games such as encrypted cats. NFT-related industries are still in their infancy. Artworks and collections are facing many problems, such as centralized distribution, solidification of industrial model, easy plagiarism, and lack of guarantee of fairness. With the development of block chain technology, its data can not be tampered with, transparency, decentralization and other advantages will bring revolutionary innovation to the art field.

With the help of block chain technology and innovative tools, artists have created many unique works of art in our times. The application of block chain in art creation enables artists and collectors to communicate in a new dimension, attracts more collectors to enter this field.

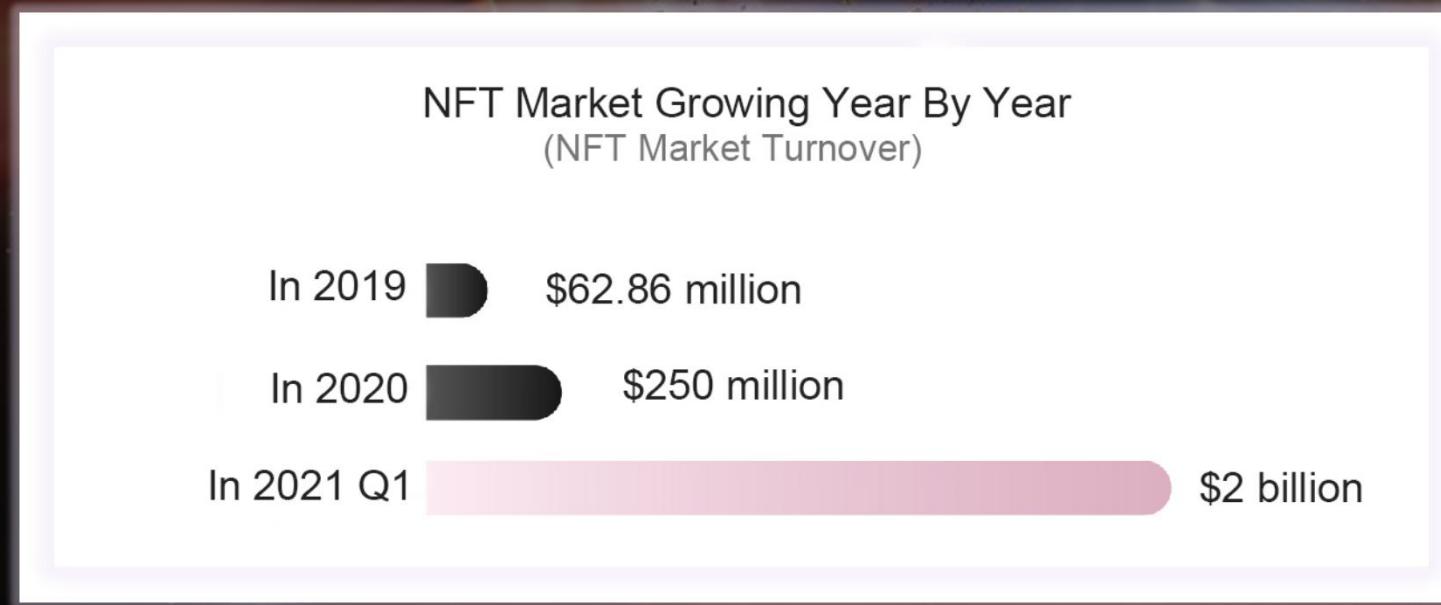

ELVES Origin

The NFT market is growing exponentially year by year, with the total transaction volume rising from 62.86 million US dollars to 250 million US dollars from 2019 to 2020, an increase of nearly three times.

In the first quarter of 2021, the trading market showed that collections and art categories occupied the main market of NFT, while games, sports, music and other NFT categories were also gradually rising. According to the statistics of October 2021, the total sales of NFT on the Ethereum chain exceeded 7 billion US dollars.

ELVES trading platform came into being.

Platform Ecology

NFT Cards

NFT Cards

NFTGameFi

NFT GameFi

NFT Mystery Box

NFT Mystery Box

NFT Trading platform

NFT Trading Platform

ELVES has built a complete application ecosystem around NFT, which currently includes comprehensive NFT cards, NFT Mystery Box, NFT chain games, NFT trading platforms and other fields. In the future, ELVES will further expand according to market demand to better meet users' one-stop needs.

As a decentralized application developed in BSC Intelligent Chain, ELVES will upload the open source code to Github after it is launched.

Economic Model

ELVES Token (ELV)

ELV is the economic circulation token of ELVES, which can circulate in the ELVES World universe, enjoy the dividend right of platform income, and have the decision making power of DAO community autonomy. In addition, ELV will also serve as an important bridge between various applications in the platform's DeFi ecosystem (liquidity mining + prediction market).

As the ecological support and settlement method of ELVES, ELV is not only an intelligent contract but also a value support. Users need to use ELV to collect cards, play games, buy equipment, build houses, and finally create their own Metaverse world.

With the continuous improvement of ELVES World, the demand for ELV from the community and users will continue to increase, and the valuable value (dividend valuation) and expected value of ELV will grow explosively.

TOKEN DISTRIBUTION

Token Distribution

ELV, as a general certificate of ELVES platform, is obtained through rewards and plays an important role in ecological applications.

The team 100000 is used to initially add liquidity pool, the remaining 4900000 is locked for 2 years, and 10% is released every quarter after 2 years until the release is completed.

ELV TOKEN is calculated according to the ecological extreme, and the final total is 10000000 pieces.

*ELVs with NFT will be reduced once every six months, with a total reduction of three times, and the maximum number of daily gifts in the first six months is 58000. There is no pre sale or private placement of tokens, and all of them are produced by mining.

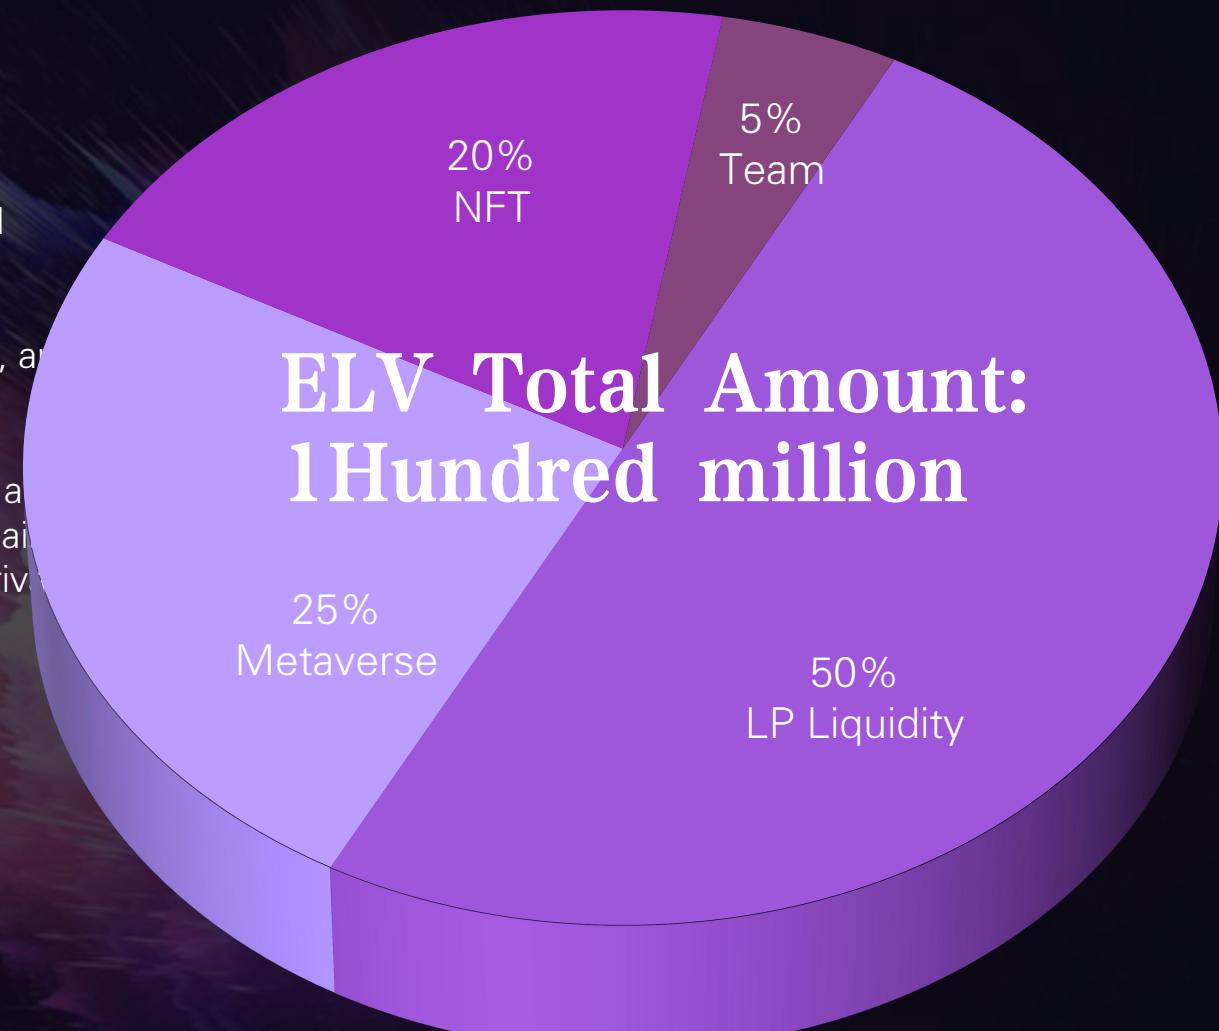

【 Deflation mode 】

- 1、NFT transaction fees are 30% off. (5% transaction fee)
- 2、NFT accelerator card part.
- 3、NFT Weapons Foundry Section.
- 4、ELV Buyback.

ELV holders can also participate in community dividends and governance, and the proceeds generated are used to give back to ELV supporters.

**ELV Total Amount:
1 Hundred million**

ONE TRUE KING WILL

NFT+Metaverse+DeFi | Cards+Fight+Mystery Box | Available in limited quantities | Peerless collection

Elves

THE RINGS NFT

THE RINGS NFT

Elves

ELVES's NFT card is the world's first non homogeneous artwork cast by blockchain technology against the background of the epic IP Lord of the Rings.

As a global epic IP, The Hobbit and The Lord of the Rings have sold more than 100 million novels worldwide, and won three world awards, including the Academy Award, the Golden Globe Award and the British Academy Award.

The Lord of the Rings NFT card image is jointly created by a number of artists, with excellent visual effects. It is a card with super high collection value, a work of art and an investment product. Users can get the card by drawing a Mystery box. At the same time, holders of cards can also be rewarded with corresponding ELV tokens to attract more new users to join the NFT world.

In the early stage, ELVES cast NFT with dwarves, orcs, elves and other races as prototypes, opening a new era of NFT in Lord of the Rings. The Lord of the Rings NFT is divided into four levels according to the rarity of cards: R, S, SR and SSR. The higher the level, the higher the rarity and the smaller the circulation. Combined with block chain technology, it perfectly realizes the non additional issuance and scarcity control of each card. Each card includes the role name, role level, role calculation power and other elements, and binds a general certificate based on block chain technology, which will be used as the basis for each player to hold the type and quantity of cards, effectively preventing card forgery and forgery.

As NFT is destroyed in the game, the circulation of NFT will continue to decrease, and the ELVES platform will be extremely deflated to capture the ecological value to the greatest extent.

CARD INFORMATION

Card Information

[Card Information]

Race: Dwarves	Level: R S	Quantity: 3000
Race: Orcs	Level: R S SR	Quantity: 5000
Race: Elves	Level: R S SR SSSR	Quantity: 10000

[Card Incentive]

With NFT card, you can enjoy the incentive layer reward, and the corresponding ELV platform pass will be awarded according to the different computing power of NFT card.

Race: Dwarves	Grade R =8 Power	Class S =10 Power
Race: Orcs	Grade R=24 Power	Class S=34 Power
Race: Elves	Grade R=80 Power	Class SR=46 Power

Class S=112 Power	Class SR=150 Power
Class SSR=184 Power	

In the first round, you can get 1 ELV per day for every 1 hashrate. At the beginning of the second round, the donated ELV will be distributed according to the calculation power held.

Elves

CARD INFORMATION

Card Information

[NFT Accelerator Card]

When LP is turned on, the hash rate gained by holding NFT is reduced. Holders can continue to maintain computing power by increasing LP or purchasing acceleration cards.

[NFT Upgrade Card]

Dwarves opened through the Mystery box in the early stage do not have SR and SSR levels, and Orcs do not have SSR levels; upgrade cards will be able to synthesize high-level NFT cards.

ELVES MYSTERY BOX

ELVES Mystery Box

The ELVES NFT Mystery box is a virtual box running on the blockchain. The combination of Mystery box and NFT increases the interest of interaction. Through the way of obtaining NFT through blind box and rewarding ELV platform pass, the project can develop steadily and create liquidity continuously.

[ELVES Mystery Box Play method]

Phase I : Dwarves Level: R S Price: 100 USDT (BEP20)

Phase II: Orcs Level: R S SR Fragments Price: 200 USDT (BEP20)

Phase III : Elves Level: R S SR SSR Fragments Price: 100U/ELV+400 USDT (BEP20)

Mystery boxes are sold in multiple batches, and the specific time is subject to the announcement.

Fragments can be synthesized into NFTs, and fragments and NFT characters can be traded.

M Y S T E R Y B O X P L A Y M E T H O D

Mystery Box Play Method

Bubble Mart was officially listed in Hong Kong on December 11 last year, and its market value once exceeded HK \$100 billion. Uncertainty, sense of surprise, collection value and other elements make Mystery boxes unique attraction.

ELVES NFT Mystery boxes, each with a unique code to avoid cheating, have become the number one player in NFT tide play by virtue of scarcity and limitation.

MYSTERY BOX PROBABILITY

Mystery Box Play Probability

The first round: Dwarves (Grade R+Grade S)

The second round: Orcs (Fragments+Cards)

【Fragments】

Two pieces can be drawn at a time, three pieces can be combined into an Grade R Orcs cards, four pieces can be combined into an Grade S Orcs cards, and five pieces can form an Grade SR Orcs cards.

Pledge To Mine

Mancake Sawp adds liquidity to get LP credentials, and uploads credentials in ELVES to get ELV computing power rewards.

The method for add liquidity is as follows: 50% USDT (BEP20) + 50% ELV

Add Liquidity Callable:

Deduct 10% handling fee for 7 day redemption

Deduct 5% handling fee for 15 day redemption

30 Day Redemption No Loss Redemption

(LP Mobile computing power reward ratio)

Coming soon, stay tuned.

TRADING PLATFORM

Trading Platform

ELVES NFT decentralized trading platform with complete functions , aggregate global IP, verify all transactions through the blockchain trust mechanism , opening up the value exchange between the virtual world of encrypted assets and the real world , high liquidity, low handling fees, real-time settlement, security and transparency.

On the ELVES platform, all digital collectibles are limited editions that can be purchased, traded, upgraded and customized.

ELVES carries out NFT output by gathering world renowned IP, and guarantees the value of artworks through a unique hedging contract mechanism, with advanced technology, fast transaction speed and low GAS cost.

ELVES aims to create a portal that leverages NFT and the non-homogeneous real world, with very high liquidity enabling buyers and sellers to buy and sell goods at the best price, similar to Amazon, Alibaba, Uber and Airbnb, which have changed the business model of tens of millions of small business owners and created tens of billions of dollars in new transactions.

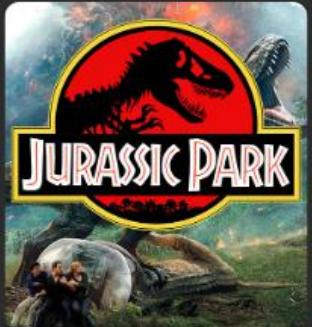

ELVES will create a more perfect ecological environment for all NFT assets and become the infrastructure for block chain technology to map the real world.

AGGREGATE GLOBAL IP

Aggregate global IP

Whether you like pop culture, games, sports, film and TV, or anime and animation, ELVES offers digital collectibles from your favorite brands.

ELVES GameFi

Elves

Constructing a new ecology of the Metaverse

ELVES GameFi, incubated and published by ELVES platform, is a card collection game focusing on NFT + DeFi play. Set in the Lord of the Rings world of Middle earth, the game tells the story of nine races, each of which has its own iconic weapons and skills. Superheroes from all over the world will use their unique abilities to fight on the battlefield. More ways to play will be unlocked after the launch.

Many characters of ELVES GameFi will be put into the Lord of the Rings game in the form of NFT cards, and players can choose their favorite character cards to play against each other. At the same time, through the way of LOOT generating NFT, ELV is used to cast its own weapons, bringing players the top game experience.

ELVES Finance

Coming soon, stay tuned.

E L V E S M e t a v e r s e

ELVES Metaverse

Elves

Constructing a new ecology of the Metaverse

ELVES constructs a virtual world, Elves World, where nine races with magical superpowers live.

When players enter Elves World, they can create their own unique digital world NFT avatars and earn tokens by collecting, cultivating and trading these magical races and contributing to the ecosystem.

Elves World consists of a number of land masses that will be presented in the form of NFTs. Here anyone can buy and own a piece of land, collect and build exciting props, and meet new people.

In the future, ELVES will empower Elves World DAPP through AR and LBS technology, bringing better user experience and more novel play methods to global players.

ELVES Road Map

1

A.Q4 2021

The Lord of the Rings Genesis Badge NFT was officially released, the blind box sales were opened, the official website was launched, and the Genesis Mining Pool was officially produced.

2

B.Q1 2022

The Lord of the Rings NFT GameFi was launched, and the ELV mining pool was gradually reduced.

3

C.Q2 2022

ELVES NFT decentralized trading platform was launched.

4

D.Q3 2022

Elves World is online.
